

Annexair heading to the Future

Annexair makes a two feet jump into the future with a new generation of green-made products in a new state-of-art factory located near by in Saint-Germain-de-Grantham. This 290 000 square foot factory, a 28 millions dollars investment, is the corner stone of Annexair growth plan.

This investment will provide 3 times more capacity allowing Annexair to properly serve its customers. Indeed, Annexair expect to double its sales within 5 years.

Victim of its own success in the United States, Annexair was approach to set the new factory in the state of Pennsylvania, Philadelphia. However, Annexair decided to remain in Quebec, to bring its production in a new Hi-Tech Smart Factory while keeping its employees competences and provide a smooth transition to ensure customer satisfaction.

Annexair currently manage 5 different locations in to support its operations. The new factory will enable the company to centralize activities and improve productivity, logistics and reduce costs.

28 millions in a new plant

Inspired by the most advanced european factory, the new plant processes will be fully automated, innovative & ecological. Indeed, the new factory will incorporate a whole new product line which has never been seen in the industry before. Its casing will be made of recycled bio-composite material. This second generation of products will progressively replace the Thermo-Composite casing.

The brand new 4.0 Smart Factory will be known as one of the greenest and ahead of its time factory in North-America. Globally, this factory will be one of the most advanced manufacturing plant in its sector.

The company expect to progressively relocate its installation by fall 2018 and plan to be fully operational through 2019.

*A bright futur in
