## Plugged in at work

Denis Janvier bought several months ago an electric car Volt that includes an electric battery and an engine if required.

To support this green turn, Annexair decided to purchase an electric charging terminal in order to provide free of charge electricity to all employees who owns an electric vehicle. Indeed, employees will be able to recharge their car during their working shift and return home 100% charged!

## Volt

This type of vehicle was first commercialized in the United-States in 2010 and in Canada in 2011.

The Volt is able to travel 80 KM distance on an electric mode and it includes a 4 cylinder engine ready to take over the road if needed.

Congratulations to Denis Janvier for this great eco-responsible purchase!
